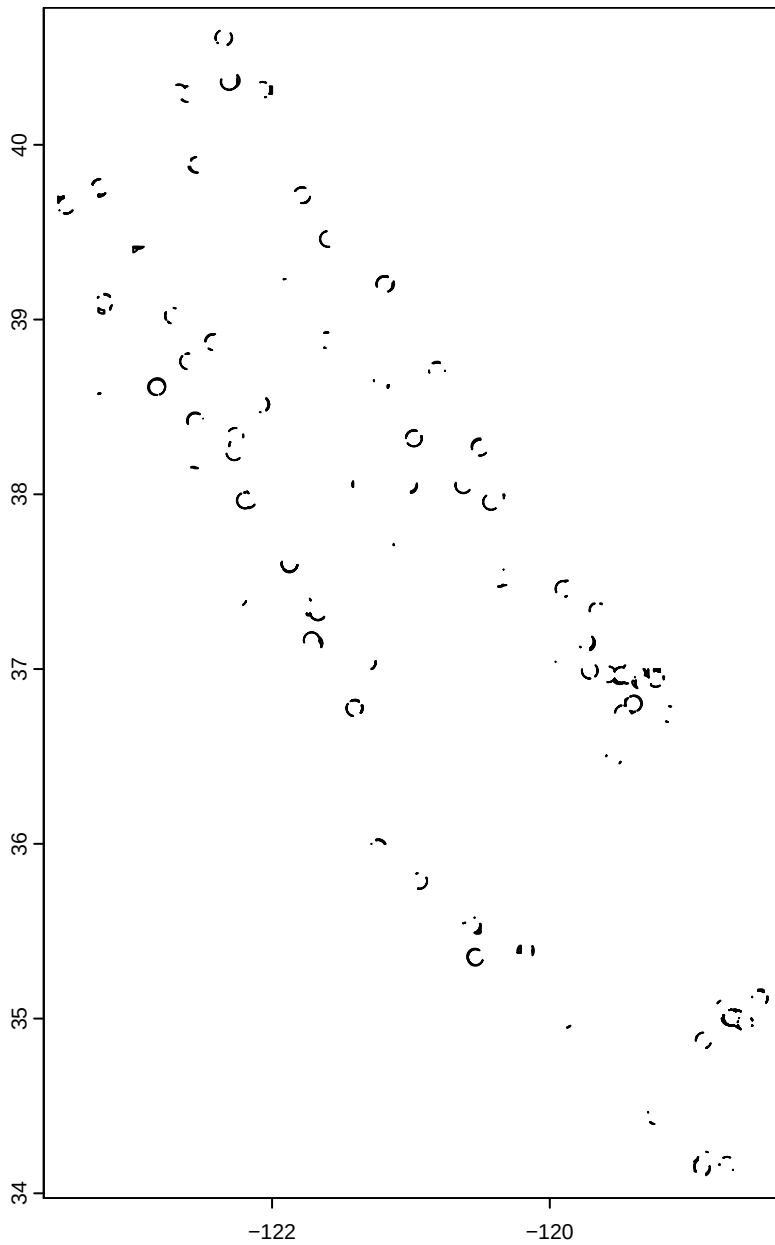

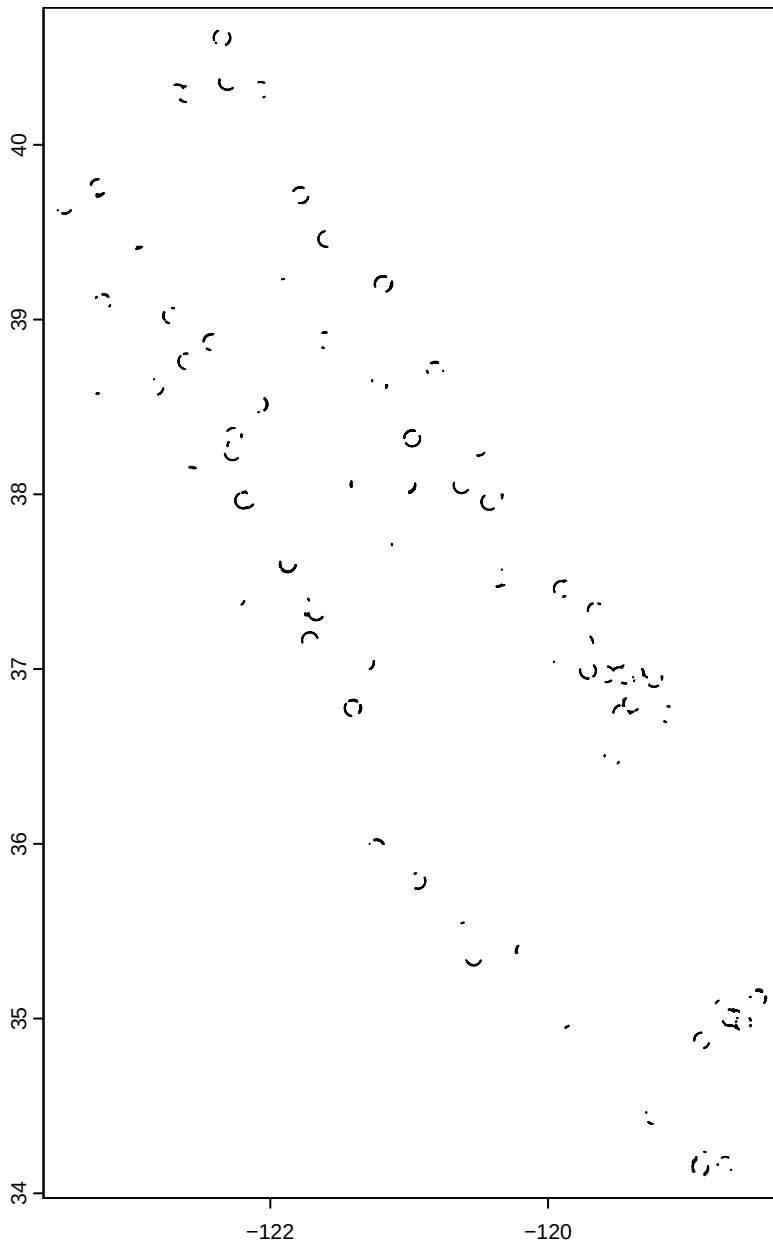

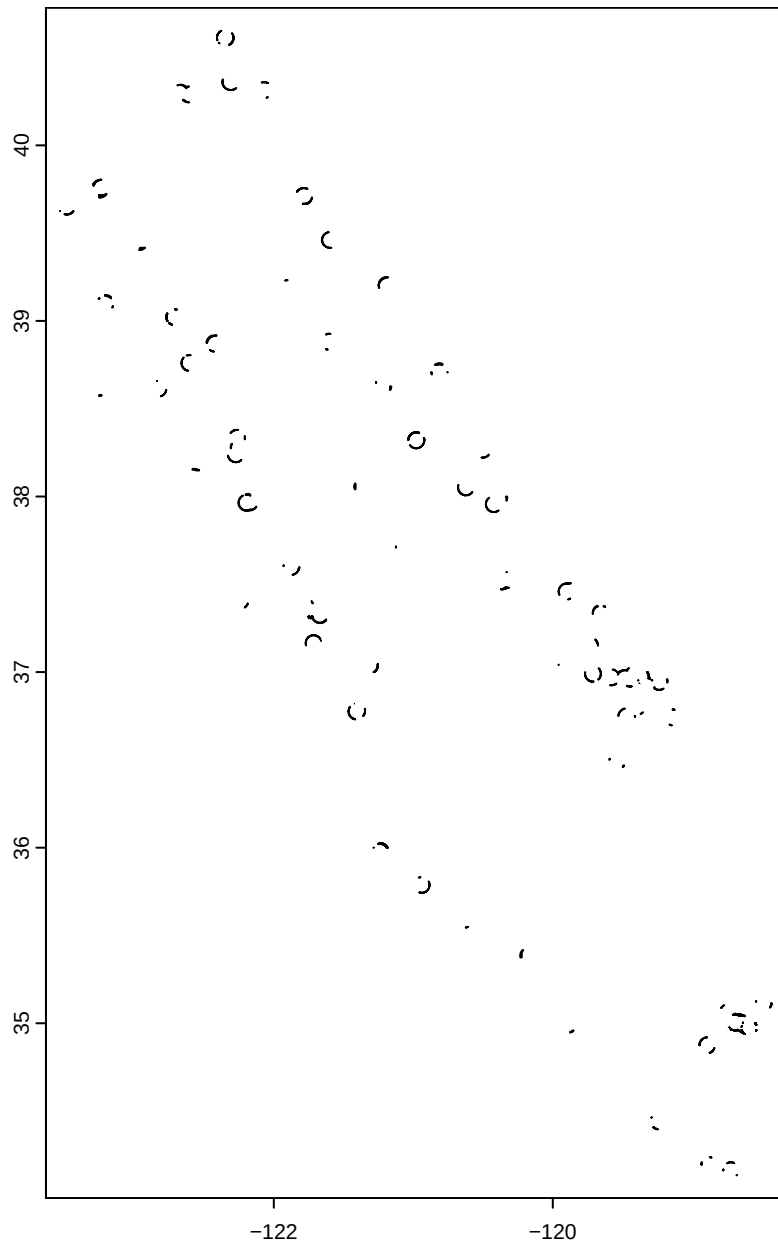

Figure 1 is a scatter plot showing the relationship between the number of species (S) and the number of genera (G) for 100 species of birds. The x-axis is labeled 'Number of species (S)' and ranges from 34 to 40. The y-axis is labeled 'Number of genera (G)' and ranges from 34 to 40. The data points are represented by open circles, showing a positive correlation between the number of species and the number of genera. The points are scattered across the plot, with a higher density of points at higher values of S and G.
